

Current NMR Facility Training Policies

All users of the main NMR facility in Chemistry must complete basic NMR training on the Inova300. New users of the ILSB NMR Facility must complete basic NMR training on the ILSB400. Once this is complete **ALL** users must download and complete the Basic NMR Quiz. After 2 weeks of using the Inova300 users may then request training on the Inova500 or the NMRS500 in Reed McDonald.

Variable temperature trainings will be done only for systems on which a user has been checked out on. Request for training should only be made when the users has a sample ready.

Post-Doc's and other visiting scholars whom would like advanced training faster should contact the NMR staff. Expedited training will include an Advanced User Quiz and a Practical Hands on Session.
